Apr. 6	Ji-hatsu No. 314	Re: Distribution of candies for congratulation of the "Children's Day".	All prefectural governors.	"
Apr. 6	Ji-hatsu No. 316	Re: Application for approval on amendment of the plan on establishment of the mothers' home of Katsura Town.	Governor, Chiba Prefecture.	"
Apr. 7	Ji-hatsu No. 317	Re: Activity, etc., of the child welfare workers during the child welfare week for the fiscal year 1949-50.	All prefectural governors.	"
Apr. 7	Ji-hatsu No. 318	Re: Handling of financial affairs at the child welfare agencies.	"	"
Apr. 7	Ji-hatsu No. 321	Re: Distribution of petroleum products for April.	Governor, Osaka Prefecture.	"
Apr. 8	Ji-hatsu No. 322	Re: Allotment of accessory materials for "tatami" for third quarter in the fiscal year 1948-49.	All prefectural governors.	"
Apr. 8	Ji-hatsu No. 323	Re: Allotment of petroleum products for the ships of Ministry of Welfare.	Governor, Osaka Prefecture.	"
Apr. 8	Ji-hatsu No. 324	Re: Report on situation in availability of petroleum products.	"	"
Apr. 9	Ji-hatsu No. 330	Re: Change of the plan on establishment of child welfare agencies (day-nurseries).	Governor, Kanagawa Prefecture.	"

### Insurance Bureau

Apr. 4	Ho-hatsu No. 22	Re: Imposition of local taxes on the health insurance associations or the national health insurance associations.	All prefectural governors.	Director, Insurance Bureau.
--------	--------------------	---	----------------------------	-----------------------------

Date	File No.	Subject	To:	From:
<u>Repatriation Relief Bureau</u>				
Apr. 8	Enge No. 387	Re: Forwarding the roster of Korean nationals whose re- patriation has been permitted by GHQ, SCAP.	Governors, Tokyo Metropolis and 25 other prefectures.	Director, Repatriati Relief Bureau.

## SECTION II

### PREVENTIVE MEDICINE DIVISION

#### Investigation of Disease Outbreaks

Memorandum (PHNJC 99), subject, "Functions and Responsibilities of Health Officers et al., in Investigation of Disease Outbreaks", has been prepared and transmitted to the Ministry of Welfare, Japanese Government. Subject memorandum defines the function, responsibility and jurisdiction of health center directors and other public health officials, professional or technical personnel, with respect to the investigation of outbreaks of human disease and correction of the causes thereof. It places responsibility directly upon the health officer for the initiation and direct supervision of all such investigations, utilizing such other specialized personnel as may be available to him, in their respective fields. Subject memorandum does not express any new policy or any policy not already expressed or implied in the present public health organization; it does, however, insist upon the application of sound and accepted public health principles in epidemiological investigations and in the elimination of public health hazards.

#### Health Center - Unauthorized Use of Name Prohibited

Article 8 of the Health Center Law (Law 101, 5 September 1947) specifically prohibits the use of the name Health Center (Hoken-sho) for any organization not established under the provisions of the Health Center law.

It has been determined that in some cases private organizations are using name which, although not specifically designated as Health Center (Hoken-sho), are nevertheless so similar that they are being interpreted as "health center". Examples are Hoken-kan (health hall), "Herusu-senta" (health center).

The use of such nomenclature is not only a violation of the Health Center Law but is also confusing and misleading the public concerning the significance of the term "health center" which is the official local governmental public health organization.

To correct this situation appropriate instructions have been issued by the Disease Prevention Bureau, Ministry of Welfare to each prefectural Governor and to the Mayor of the major cities (Yo-Hatsu No. 333 dated 9 April 1949).

It is suggested that Military Government Health Officers ascertain that the spirit and intent of Article 8 of the Health Center law is complied with.

#### Public Health and Welfare Information

##### National Conference of Information Officials.

The first national conference for prefectural public health and welfare information officials was held in Tokyo on 13 - 14 April 1949. The conference was attended by one hundred thirty persons representing every prefecture in Japan. Information activities policies and programs for 1949 were outlined and discussed. Delegates were urged to include in their information programs a monthly discussion of some phase of the major public health and welfare problems confronting the people of Japan, i.e., Tuberculosis, Venereal Disease, Communicable Disease, Nutrition, Sanitation, Mother and Child Hygiene and welfare activities. Necessity for close

liaison between the central government and prefectural and local officials was stressed. Technical advice, guidance and instruction in the various fields of information work was presented through discussions and demonstrations led by experienced men in each of the fields of activity.

It was suggested that officials put into immediate effect a publicity program concerning the early control of mosquitoes in support of the nation-wide mosquito control program designed to forestall a possible break of Japanese B Encephalitis. This control program is correlated with the Ministry of Agriculture and Forestry. (See item under Veterinary Affairs, this Bulletin).

### SECTION III

#### NURSING AFFAIRS DIVISION

##### Prefectural Five-Month Public Health Nurses Course

Following the completion in Tokyo on 26 March of the one-month public health nurses course for instructors, designed to provide teachers for the prefectural five month public health nurses course, the nurses worked out a curriculum and program considered adaptable to all the prefectures and which was accepted by the Ministry of Welfare.

On 20 April, the Medical Affairs Bureau, Ministry of Welfare, forwarded I-Hatsu No. 405, subject: "Training Course for Public Health Nurses," to each prefectural Governor which outlines the following list of subjects in order of preference. This provides for 444 class hours, plus 18 hours for "excursions."

<u>Subject</u>	<u>Hours</u>	<u>Instructor *</u>
Introduction to Public Health	34	
Principles & Practice of P.H.N.	52	
Nursing Technique	100	
Nutrition	18	Nutritionist
Communicable Diseases	46	Medical (Doctor) - 28, Nursing - 18
Tuberculosis	38	Medical (Doctor) - 18, Nursing - 20
Venereal Diseases	32	Medical (Doctor) - 14, Nursing - 18
Oral Hygiene	6	Dental (Dentist)
Maternity Hygiene	30	Medical (Doctor) - 16, Nursing - 14
Infant & Child Hygiene	32	Medical (Doctor) - 16, Nursing - 16
School Hygiene	10	
Industrial Hygiene		
Adult Hygiene (none Com. Dis.)	12	
Principles & Method of Teaching	14	
Social Service	10	Social Worker Specialist
Mental Hygiene	10	P.H. Nurse if proper specialist not available
	—	
Total	444	
Excursion and Others	18	
Grand Total	462	

Class Schedule: Six (6) hours daily (Monday through Friday), Saturday 3 hours.  
Total 33 hours weekly. Class periods limited to two (2) hours.  
Lectures: Fourteen (14) weeks.  
Field Practice: Six (6) weeks.

\*Unless otherwise indicated, all instructors are Public Health Nurses.

##### Requirements:

1. A clinical nurses license or,
2. Until 31 December 1949, a total of one year's experience in study or practice work, under a Doctor's Certification, in public health nursing, clinical nursing or midwifery will be acceptable for entrance. However, on 1 January 1950, the effective date of the Nursing Law No. 203, all applicants must possess a clinical nurses license.

Note: Ministry of Welfare Ordinance No. 4, dated 29 January 1949, subject: "Regulations Relative to Public Health Nurses", sets forth the above requirements and also additional data concerning the five-month public health nurses course.

I-Hatsu No. 405 also provides for appointment of public health nurses as full-time instructor in charge of the course, further that two or more prefectures can jointly sponsor a course with the prefecture holding the course being responsible for the program. This provision has merit as a joint sponsorship would permit more qualified instructors for the course at less expense to the prefectures.

Other pertinent points establish class levels at not less than 15, nor more than 50, however, under joint prefectural program, 60 students may be permitted. The ratio of students to staff nurses was established as 2 to 3 respectively for health center field experience with a maximum of six students at one time so as not to interfere with the health center program. Billots are to be provided for students from points too far for daily commuting. Facilities and necessary equipment will be provided by the prefectures. The cost of tuition will be determined by the prefectures at a later date.

#### SECTION IV

##### VETERINARY AFFAIRS DIVISION

##### Condensed Milk and Prepared Milk Foods

Recent investigations have revealed an effort to divert spoiled condensed milk and prepared milk foods to the candy and bakery industries. Considerable quantities of condensed milk have already been justly condemned by the Ministry of Welfare as being unfit for human food of any kind. In the future (after June 1st) both of these products will be packed and distributed in retail sized tin cans, and if older than six months from date of manufacture (printed on package) should be re-inspected and tested before release for distribution. Japanese inspectors must enforce more strict compliance with present standards of milk sanitation, especially in milk processing plants.

##### Animal Hides

Assistance is being requested of Japanese veterinary inspectors in all slaughter-houses in a program to obtain better hides from horses, cattle and swine. It is reported that over 75% of all hides in Japan (except Hokkaido) are spoiled for economic production of good leather by reason of nicks, knife cuts and accumulated filth. If better workmanship is insisted upon, at the time of skinning the carcass, and more careful handling of the hide thereafter, a sizeable reduction in the percentage of damaged hides is anticipated.

##### Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreak of animal diseases for the period 16 - 22 April.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Tokyo	Swine-cholera	27
Hyogo	" "	4
Miyagi	" "	2
Aomori	Suspicious E.E.E.	2

##### Operational Instruction concerning Mosquito Control (DDT Spray Program)

The following instructions from the Animal Hygiene Section, Animal Industry Bureau, Ministry of Agriculture, subject: "Disinfecting with 5% DDT Solution", were issued on 20 April 1949 to all prefectural Governors.

## 1. Purpose.

For driving away blood-sucking insects, 800,000 stables in the whole country must be disinfested with 200,000 gallons of DDT oil solution. Vaccination of horses and swine also is to be carried out against equine enzootic encephalomyelitis.

## 2. Plan

(1) Area: Whole country.

(2) Period: From the first day of May to the end of May.

(3) Distribution:

(a). 50,000 gallon: At the rate of number of horses and cattle in each prefecture.

(b). 60,000 gallon: For number of stable in rice field district in each prefecture.

(c). 10,000 gallon: At the rate of number of swine in each prefecture.

(d). 80,000 gallon: For emergency.

(e). Necessary amounts in livestock breeding farm, race course and others are included in items (a), (b) and (c).

(f). D.D.T. in items (a), (b), and (c) are allotted to each prefecture.

(4) Enforcement Method:

(a). Organization of disinfecting squads:

These squads are organized by officials of cities, towns and villages, agents of Agriculture Improvement Bureau, the staff of Agriculture Association, Livestock Insurance Association and Health Centers.

(b). Disinfecting objective:

In the limit of allotted amount, prefectural government pick out disinfecting area.

(c). Ceiling, walls and dark places in the stable are to be disinfested with 5% D.D.T. solution.

(d). Method of disinfection and amount.

Stables are to be disinfested by sprayer or paint brush with  $\frac{1}{4}$  gallon of D.D.T. oil solution.

(5) Charge of Cost:

(a). Each individual pays all charges for disinfection, (actual expenses of  $\frac{1}{4}$  gallon are 100 yen).

(b). This D.D.T. under control of the Welfare Ministry has been appropriated for this plan. Expenses for purchase of D.D.T. will be paid by each Prefectural Government during the first ten days of August.

(6) Report:

Each Prefectural Governor shall report the results of this program to the Ministry of Agriculture and Forestry and the Ministry of Welfare upon the completion of this plan without delay.

(7) Cooperators for this plan:

General Headquarters, SCAP

Military Government Teams

Welfare Ministry, Prefectural Health Departments and Health Centers

Ministry of Agriculture and Forestry:

Agricultural Improvement Bureau

Agricultural Administration Bureau

Land Development Bureau

(We entreat Military Government in each district to cooperate strongly)

(8) Information concerning this plan will be disseminated by means of newspaper, radio and other media.

INITIAL DISTRIBUTION OF 5% D.D.T. OIL SOLUTION IN EACH PREFECTURE

<u>PREFECTURE</u>	<u>GALLON</u>	<u>PREFECTURE</u>	<u>GALLON</u>
Hokkaido	10,000	Mie	1,400
Aomori	2,500	Shiga	2,000
Iwate	3,000	Kyoto	1,800
Miyagi	3,000	Osaka	1,800
Akita	2,500	Hyogo	5,000
Yamagata	3,000	Nara	500
Fukushima	3,500	Wakayama	1,200
Ibaraki	2,500	Tottori	2,000
Tochigi	2,500	Shimane	2,000
Gumma	2,500	Okayama	4,000
Saitama	3,000	Firoshima	3,000
Chiba	3,000	Yamaguchi	2,500
Tokyo	1,500	Tokushima	1,500
Kanagawa	2,000	Kagawa	2,000
Niigata	3,000	Ehime	2,000
Toyama	1,000	Kochi	1,500
Ishikawa	1,200	Fukuoka	3,500
Fukui	700	Saga	3,000
Yamanashi	800	Nagasaki	2,500
Nagano	2,500	Kumamoto	4,000
Gifu	2,000	Oita	3,500
Shizuoka	2,300	Miyazaki	4,000
Aichi	2,300	Kagoshima	5,000

TOTAL 120,000

NOTE: Additional Supply can be obtained upon request.

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of February 1949

Special Milk

Number of farms inspected . . . . .	5
Samples examined. . . . .	12
Overbacterial standards (50,000 per cc). . . . .	1
Under butterfat standards (3.0 percent) . . . . .	-

Dressed wt. (kgs)	1,741,385.4	22	1,457
Condemned Ante-mortem	0	0	0
Condemned Post-mortem	8	0	0
Partial	409	0	0
Viscera	8,326	0	31

### Meat Processing Establishments

Number of establishments. . . . .	274
Number of establishments inspected. . . . .	236
Sanitary condition . . . . .	Good . . . . . 57
	Fair . . . . . 145
	Poor . . . . . 24
Total number of inspections . . . . .	403
Amount of meat and meat products examined . . . . .	75,844 kg
Amount of meat and meat products condemned. . . . .	0
Cause for condemnation. . . . .	None
Disposition. . . . .	None

### Retail Meat Shops

Number of establishments. . . . .	14,634
Number of establishments inspected. . . . .	8,170
Sanitary condition . . . . .	Good . . . . . 2,251
	Fair . . . . . 4,809
	Poor . . . . . 1,104
Total number of inspections . . . . .	9,708
Amount of meat and meat products examined . . . . .	1,499,281 kgs
Amount of meat and meat products condemned. . . . .	228 kgs
Cause for condemnation. . . . .	Uncleanliness, staleness and putrefaction
Disposition. . . . .	Fertilizer

### Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted the following sanitary inspections on seafood establishments during the month of February 1949:

### Wholesale Seafood Markets

Number of establishments. . . . .	1,366
Number of establishments inspected. . . . .	954
Sanitary condition. . . . .	Good . . . . . 174
	Fair . . . . . 637
	Poor . . . . . 181
Total number of inspections. . . . .	4,481
Amount of seafood examined. . . . .	33,591,268
Amount of seafood condemned. . . . .	643,934
Cause for condemnation. . . . .	Putrefaction, staleness and uncleanliness
Disposition. . . . .	Fertilizer and animal feed.

### Seafood Processing Establishments

Number of establishments. . . . .	8,868
Number of establishments inspected. . . . .	2,875
Sanitary condition. . . . .	Good . . . . . 488
	Fair . . . . . 1,636
	Poor . . . . . 770
Total number of inspections. . . . .	4,123
Amount of seafood examined. . . . .	6,656,801
Amount of seafood condemned. . . . .	181
Cause for condemnation. . . . .	Putrefaction and staleness
Disposition. . . . .	Animal feed

## Seafood Retail Shops

Number of establishments . . . . .	43,712
Number of establishments inspected . . . . .	15,975
Sanitary condition. . . . .	Good. . . . . 2,304
	Fair. . . . . 9,773
	Poor. . . . . 3,834
Total number of inspections. . . . .	17,245
Amount of seafood examined. . . . .	1,901,846
Amount of seafood condemned. . . . .	1,269
Cause for condemnation. . . . .	Peturefaction and staleness
Dispositon. . . . .	Animal feed and fertilizer.

## Food Sanitation

The Food Sanitation Section, Ministry of Welfare, reports the following sanitary inspection of food and beverage establishments during the month of February 1949:

Number of inspections. . . . .	477,336
Establishments to be improved. . . . .	73,124
Establishments completing improvements. . . . .	89,037
Number of food samples collected for analysis . . . . .	4,539
Number of administrative punishments. . . . .	2,293

## Census of Food Inspectors

Number authorized with 50% national subsidy. . . . .	1,767
Actual number employed receiving national subsidy . . . . .	1,584
Actual number employed receiving no national subsidy (Prefecture and city employees). . . . .	2,180

## SECTION V

### SUPPLY DIVISION

During the period 3 - 16 April, 7,369 pieces of dusting and spraying equipment were distributed to 31 prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayers</u>	<u>Semi-Automatic Sprayers</u>	<u>Hand Sprayers</u>	<u>Engine Sprayers</u>

X-ray Film, 35 mm (Rolls)	0.40
X-ray Film, Dental (Doz)	0.85
X-ray Film, 120 Size (Rolls)	1.20
Santonin (Tablets)	1.64
Sulfadiazine (Tablets)	0.47

Detailed distribution figures for medical, dental and sanitation supplies and Equipment for January and February, together with their monthly averages for 1947 and 1948 may be found in Inclosure No. 1-

#### Pyrethrum Emulsion

A total of 109,600 gallons of pyrethrum emulsion concentrate (to be diluted 30 times with water) was manufactured during the period 26 March - 10 April, which will produce 3,288,000 gallons of finished insecticide. This amount represents approximately 25% of the annual production goal of 434,300 gallons of concentrate. The sixteen pyrethrum emulsion producers have already received total allocations of petroleum products and all necessary raw materials to complete the 1949 production schedule and from all indications 4,300 drums of finished concentrate will be produced by 25 April. Present production trends signify the program will be completed in time to carry out insect and rodent control activities as planned. Distribution of the finished pyrethrum emulsion concentrate will be made as the material is produced.

#### Hexylresorcinol Production

Hexylresorcinol production during the week of 1 - 8 April continued to show increases in both crystalline form and gelatin coated pills. 596.97 Kgs of crystals were produced and the entire amount passed assay. A total of 1,549,334 pills were produced, with 40,000 failing to pass assay and 290,893 still under assay. During the period 26 March - 8 April, 1,189.9 Kgs of crystalline type hexylresorcinol and 1,977,630 pills were produced and passed assay. Less than one percent of the crystalline type and two percent of the pills failed to pass assay. It is anticipated that increasing quantities of hexylresorcinol will be made available henceforth for distribution throughout all prefectures.

### SECTION VI

#### NARCOTIC CONTROL DIVISION

#### Enforcement

Two narcotic registrants, physicians, who lost narcotics through failure to store them in a locked cabinet, were prosecuted and fined ¥ 1,000 each. While the fines are small the action will tend to eliminate some of the many minor thefts of narcotics.

Acting on information that narcotics, seized from traffickers in Hokkaido, had originated in Kobe, enforcement officials apprehended the individual in Kobe and found him in possession of a quantity of heroin. The same procedure proved successful in Tokyo in following up information obtained elsewhere. Coordination of informational leads has reached a high degree of efficiency.

#### False Claims of Narcotic Addiction Cures

A press release in which it was claimed that Ofunojin is an absolute cure for narcotic addiction is being investigated as a possible violation of the Pharmaceutical Affairs Law. Competent authorities have stated that "Ofunojin treatment, then, is a variant of the atropine and hyoscine treatments which have been thoroughly discredited----as being not only ineffective but even dangerous".

## SECTION VII

### WELFARE DIVISION

#### Licensed Agencies for Relief in Asia (LARA)

LARA, at present, has approximately 5,000 bales of clothing available in their warehouse (Yokohama) for allocation. Basic clothing needs have been provided for all authorized institutions, orphanages, hospitals, etc., included in the LARA program. Program for these institutions has developed whereby supplemental aid, through LARA supplies, is sustaining.

LARA Central Committee has recommended a special distribution plan to provide practical clothing for social workers (usually poorly paid) in institutions, etc., who have been constantly responsible for the distribution of LARA supplies for the past two and a half years. It is proposed that each of the aforementioned social workers receive two (2) essential items of wearing apparel. The category of social workers to be included in the distribution is proposed in accordance with the following:

a. Women workers in Homes for Widows and Children.

b. Women workers in Day Nurseries.

c. Workers in institutions caring for children and infants. This does not include camps for repatriates or other war sufferers nor does it include hospital staff members.

d. Staff members of Prefectural Welfare Offices who have had responsibility for actual distribution of LARA goods.

NOTE: Will not exceed 30 persons on any prefectural staff with the possible exception of Tokyo and Osaka.

The plan of distribution in each prefecture will be presented to the Military Government Welfare Officer, for his information and comment, by the officials of the Prefectural Welfare Section.

This special allocation and distribution will be reported separately by the Ministry of Welfare to the LARA Central Committee and to Public Health and Welfare Section, CHQ, SCAP and will give, in detail, items distributed, where and to whom distributed. Individual receipts will be taken from each individual receiving items of wearing apparel (receipt will carry "han").

The total number bales of clothing necessary for this distribution will be 473 (338 bales for women - 135 bales for men). Twenty-three thousand nine hundred and sixty-three individuals are estimated for inclusion in this distribution, namely:

Prefectural offices (reference, sub-paragraph d above)

Men	1,120	
Women	222	
Total		1,342

Institutional welfare workers (reference, sub-paragraphs a, b, c above).

Women	16,796	
Men	5,825	
Total		22,621
Grand Total		23,963

This special allocation and distribution proposal was coordinated with the Welfare Branch, Military Government, Headquarters Eighth Army and it was the consensus that the proposed special distribution, particularly in view of large quantity of

LARA clothing (bales) now available, was an appropriate award and would serve not only to furnish needed supplemental clothing to these specific welfare workers but also would be an effective means of giving recognition to them for their efficient handling of LARA supplies over the past two and a half years.

NOTE: Previous special allocations and distribution of LARA goods approved were: yard goods for nurses' uniforms (hospitals), hand-bag kits for Day Nursery workers, yard goods for doctors' coats (hospitals), shoes for nurses (hospitals) and shoes for prefectural welfare workers.

The special LARA allocation and distribution briefly outlined above has been approved and distribution will begin on or about 25 April.

#### Public Assistance - Medical Care

The Social Affairs Bureau, Ministry of Welfare has released Sha-Otsu-Hatsu No. 92 dated 1 April 1949, subject: "Handling of Medical Care Under the Daily Life Security Law", which outlines new eligibility requirements for recipients and non-recipients of public assistance and prescribes forms.

##### Provisions are:

a. Those receiving daily living assistance are automatically eligible.

b. Those not receiving daily assistance are eligible if, after determining their minimum living needs by use of the public assistance allowance tables, the difference between their needs and income is not sufficient to pay for the medical care.

(In the latter case resources owned by the applicant or support by relatives are taken into account. Resources such as "tools of trade", the "home place" under certain circumstances, and things necessary for education and spiritual comfort such as a radio, may be excluded from consideration. Income from relatives must be actual and not presumptive).

c. Those covered by health insurance may be eligible for partial medical care costs (generally for their dependents, who are not fully covered).

In determining eligibility for those not receiving public assistance, the cost of medical care used in such determination must be based on the prevailing medical fee scale which is computed through the point system of social insurance medical care. It is recognized that an individual may have sufficient funds for this purpose but may not have sufficient funds to cover the ordinary fee scale for private care. In these cases the heads of cities, towns and villages are urged to assist in arranging for less expensive private medical care.

The plan includes authorization of hospitalization "only when according to the physician's diagnosis or certification it has been recognized as difficult to attain the object of medical care by means of residence protection", such as for an operation or, "when it is recognized that if the person responsible for subsistence (breadwinner) needs care and his recovery will be hastened to a marked degree, resulting in the redemption of his working capacity".

Nursing care may also be provided under restricted circumstances. Birth aid is considered under the same circumstances as those outlined above.

#### Child Welfare - Duties of Child Welfare Officials

The Childrens' Bureau, Ministry of Welfare has issued Ji-Hatsu No. 186, dated 4 March 1949, subject, "Duty of Child Welfare Official and the Guidance and Supervision for Him", a copy of which is attached to this Bulletin (Incl. No. 2). This order supplements the information contained in Ji-Hatsu No. 808, dated 2 December 1948, subject, "Concerning the Sending of the Outline of the Function of the Child Welfare Officials and Child Welfare Workers", a copy of which was attached as Inclosure No. 7 to Public Health and Welfare Weekly Bulletin No. 96.

The present order clarifies the legal position of the child welfare official and requires close cooperation with child welfare workers and heads of cities, towns and villages.

### Public Assistance and Child Welfare Institution Care

The Social Affairs Bureau, Ministry of Welfare has issued Sha-Otsu-Hatsu No. 91, dated 7 April 1949, subject, "Management of Protective Institutions" which concerns action to be taken in the event of poor management or mismanagement of institutions, reports of which are continuously found in newspapers and Military Government reports. Further clarification of this matter has been presented to the prefecture welfare officials at their meeting in Tokyo 22 - 23 April. Public Health and Welfare Section has requested that the Ministry of Welfare and prefecture welfare departments fully recognize their responsibility to the persons for the care of which national or prefecture funds are being expended and has requested that drastic action be taken when negligence or mismanagement is found either in public or private institutions.

Welfare officers may wish to alert local newspapers to their responsibilities in throwing light on institutional care in their communities.

## SECTION VIII

### SOCIAL SECURITY DIVISION

#### Legislation

Amendments to all the social insurance laws except National Health Insurance are scheduled for consideration by the present Diet. In general, they provide adjustments in contributions and benefits to keep pace with the inflationary trend, a strengthening of the legal basis for advisory councils, and modification necessary to maintain conformity with related legislation.

Particular vital amendments are proposals to increase contribution rates and establish partial sharing of initial medical examination costs by direct charge to primary insured under Health Insurance. The greatly expanded use of that program has invalidated previous actuarial calculation.

Legislation is also being proposed to meet any unemployment problem that may arise from the adjustments in industry resulting from the application of the economic stabilization program. A public works program geared to employ such workers, an expanded unemployment insurance system, and a more effective employment exchange program are contemplated.

March 4th, 1949

TO : Each of the Governor of Metropolis, Hokkaido or the prefectures.

FROM : Director of Children's Bureau, Welfare Ministry

SUBJECT: Duty of the child welfare official and the guidance and supervision for him.

Concerning the subject matter you must have understood already by Law, Ordinance, instruction by "Outline of the activity of the child welfare official and child welfare worker" and others issued through this Bureau. As the child welfare official is a new program in this country and is a most important field organ, the guidance and supervision for them shall be made with full consideration per the following note so that satisfactory results may be obtained.

#### Note

I. As the purpose of the child welfare officials are to give consultation and guidance for the problems concerning the welfare of children and make the effort for the promotion of positive welfare for them by case work method, their duty is mainly the case work for them and group guidance may be done according to the need of local situations.

Group work is necessary to effect the case work by the child welfare official and diffusion of child welfare thought through lectures and courses, etc., or group guidance towards the organization of the children's club and mothers club, etc., are most desirable. But just group work with no relation to their case work should be avoided.

II. As the child welfare official is not tied to a spot as an office worker, the following report program shall be taken in each prefecture for supervision and effective work.

1. The child welfare official shall have at her office work diary, children's records, reports of the meeting of child welfare workers at which he was present and other documents, etc.

2. The child welfare official shall submit the written report of the services rendered in the previous month before \_\_\_\_th every month to the prefecture (the head of Children's Section).

3. The child welfare official shall report the matters discussed in the meeting of the child welfare workers at which he was present.

4. The child welfare official shall make a close liaison with the local office or branch office to which jurisdiction his assigned area belongs.

III. The head of the child welfare center may have the child welfare official guide the child or its guardian (Law, Article 16, paragraph 1, item 2 and Law, Article 27, paragraph 1, item 2) and ask him to make the necessary investigations (Regulation, Article 5) and the child welfare official shall report the conditions concerning the children's welfare of his assigned area with his opinion about them (Regulation, Art. 6). The relation of the head of the child welfare center and the child welfare official in the above cases is in the line of their work and the direction and supervision over the matters concerning the latter's status and public service is under the prefectural governor. In some prefectures the head of the child welfare center is taking the direction and supervision over the child welfare officials which should be corrected as it is against the law and ordinance.

IV. As the fields of the child welfare service is in cities, towns and villages where activities of the child welfare officials are to be carried out, the child welfare official is naturally closely related with the city, town or village and

their cooperation per the following must be made beyond the liaison which is provided by the law and ordinance.

1. The child welfare officials shall give the mayor of the city, town or village the information, materials and assistance concerning their work which is required by the city, town or village.

2. The mayor of the city, town or village shall cooperate with the child welfare officials in charge of the city, town or village concerning their work.

3. In the city district where the welfare committee offices are, the child welfare official shall keep close liaison with the Minsei office of her or his assigned area and the office shall be made to cooperate with the child welfare official.

V. The child welfare official shall get cooperation of the child welfare workers of her or his assigned area and make the close liaison with the latter as per the following:

1. The child welfare official shall attend to the meeting of the child welfare workers opened in the assigned area (in the rural area where the wider area is assigned to a child welfare official, he or she shall attend to one by one) and not only join in their discussion for the measures to be taken for the welfare of children but positive leading by presenting the problems for discussion and the opportunity for study should be done. It is the same with the meeting of the standing committee members of the child welfare workers.

2. When the child welfare official is to take a new case, he or she shall keep in touch with the child welfare worker in charge of the area the child lives and any case of delinquent, dislocated, cruelly treated or feeble-minded children, etc., which seems too difficult for the child welfare worker must be willingly handled by the child welfare official keeping functional liaison with the former so that successful result may be obtained.

3. The liaison of the child welfare official with the child welfare worker shall be in the line of investigation, procedure or guidance for the children and the general guidance and supervision over the child welfare workers shall be by the Prefecture.

VI. Concerning the area to be assigned to a child welfare official it is said in Article 1 of Enforcement Regulation that the child welfare officials shall have the charge of city districts mainly and in the area outside the assigned area they shall keep the liaison and help to promote the activity of child welfare workers. But it shall be changed as they shall have the whole districts of the prefecture cut for each child welfare official and they shall work more in the urban districts where there are more problems of children within each area assigned and keep liaison with the child welfare workers and help to promote their activities.

DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES IN  
JAPAN FOR THE WEEK ENDED 16 APRIL 1949

During the sixteenth week ended 16 April 1949 there were reported 20,802 cases of communicable disease compared with 20,338 cases in the preceding week. Reports were received from all prefectures in both weeks. Some corrections were received for last week, and comparisons in this digest are based upon corrected figures.

Diphtheria cases decreased 14 percent, from 355 last week to 304 currently. There were 43 deaths in the present week compared with 40 previously. The current number of cases was 12 percent less than that (346) for the sixteenth week of last year and 58 percent below the corresponding 1947 figure (732). There were decreases from last week in 29 prefectures, increases in 12, and no change in 5. The current and cumulative case rates were 19.8 and 24.3 respectively. The corresponding death rates were 2.8 and 2.6.

There were 54 cases of dysentery this week compared with 49 in the preceding week. Deaths numbered the same (11) in both periods. Current cases were 41 percent less than in the same week of 1948 (91) and nearly 45 percent below those (97) in the corresponding period of 1947. Fifteen prefectures reported fewer cases this week than last week, 12 had more, and in 5 the number did not change. The remaining 14 prefectures had no cases in either week. Tokyo-to and Shizuoka Prefecture had 15 and 9 cases respectively this week, 19 additional prefectures had from 1 to 4 cases each, and the other 25 prefectures reported no cases. The current and cumulative case rates were 3.5 and 2.8 respectively. The corresponding death rates were both 0.7.

Typhoid fever cases numbered 65 in the present week whereas last week there were 70. Current deaths (7) were about half those (13) last week. Cases this week were approximately half of the number (133) in the same period of last year and were a third of the corresponding 1947 total (192). Sixteen prefectures had increases over last week of 1 or 2 cases each, 13 prefectures had comparable decreases, and in Mie Prefecture cases declined from 8 to zero. Eight prefectures did not change, and in the remaining 8 prefectures there were no cases in either week. Cases this week were distributed among 29 prefectures having from 1 to 9 cases each. The current and cumulative case rates for all Japan were 4.2 and 5.5 respectively. Corresponding death rates were 0.5 and 0.7.

The number of paratyphoid fever cases this week (19) was approximately two-thirds of the figure (28) for the preceding week. There were 2 deaths compared with 3 previously. Current cases were 40 percent of those (48) in the same period of 1948 and approximately a fifth of the corresponding 1947 total (87). Thirteen prefectures reported from 1 to 4 cases each this week, and the other 33 prefectures reported no cases. The current and cumulative case rates were 1.2 and 2.0 respectively. The corresponding death rates were both 0.1.

There were 5 cases of smallpox this week compared with 2 cases in the previous week. No deaths occurred in either week. In the sixteenth week of last year no cases were reported, but in the same period of 1947 there were 22. One of the current cases was in Yamaguchi Prefecture and the other 4 occurred in Fukuoka Prefecture. The current and cumulative case rates for all Japan were 0.3 and 0.1 respectively. The cumulative death rate was less than 0.1.

Thyphus fever cases numbered 6 this week whereas last week there was one. There have been no deaths for 4 weeks. In the sixteenth week of 1948 there were 110 cases, and in the corresponding period of 1947 there were 36. The current cases occurred in Miyagi (4) and Kanagawa (2). The current and cumulative case rates were 0.4 and 0.3 respectively. The cumulative death rate was less than 0.1.

The number of malaria cases this week (49) was nearly twice that (25) for the preceding week. There was one death compared with 3 previously. Current cases were approximately two-thirds of those (71) in the same week of 1948 and little more than a fourth of the corresponding 1947 figure (179). There were increases in last week in 15 prefectures, decreases in 6, and no change in 5. The other 20 prefecture had no cases in either week. Shiga had 18 cases this week, and the remaining 31 cases were distributed among 19 additional prefectures where they numbered from 1 to 5 each. The current and cumulative case rates were 3.2 and 1.7 respectively. The corresponding death rates were both 0.1.

No Japanese "B" encephalitis cases or deaths have been reported since early March. There were no cases or deaths in the sixteenth weeks of 1948 and 1947. The cumulative case and death rates as of 16 April 1949 were both less than 0.1.

Scarlet fever cases this week (82) were 10 percent less than in the preceding week (91). There were no deaths in either week. The number of current cases was 9 percent greater than that (75) in the sixteenth week of last year and 19 percent above the corresponding figure (69) for 1947. Fifteen prefectures had fewer cases this week than last week, 9 had more cases, and 6 did not change. The other 16 prefectures had no cases in either week. All of the current cases occurred in 18 prefectures. More than 80 percent of the cases were in 7 prefectures (Kanagawa, Wakayama, Nagano, Saitama, Kyoto, Tokyo-to and Hokkaido), which had from 7 to 12 cases each, and the remaining 15 cases were distributed among the other 11 prefectures having 1 or 2 cases each. The current and cumulative case rates for all Japan were 5.3 and 5.7 respectively. The cumulative death rate was 0.1.

There were 58 percent more cases of epidemic meningitis this week (41) than last week (26). Current deaths (11) were nearly twice the previous figure (6). Cases this week were 45 percent less than those (75) in the same week of 1948 and more than 70 percent below the corresponding 1947 figure (147). There were increases over last week in 12 prefectures, decreases in 6, and no change in 5. The twenty-three additional prefectures had no cases in either week. It should be noted that the report of 16 cases for Fukuoka Prefecture last week was an error, and a corrected report has shown the true figure to be 3. Eighteen prefectures accounted for the total current cases, reporting from 1 to 7 each. The current and cumulative case rates for all Japan were 2.7 and 2.0 respectively. The corresponding death rates were 0.7 and 0.5.

The number of measles cases this week (5,601) increased 14 percent over the preceding week (4,926); however, the current figure was 5 percent below the number (5,885) reported two weeks ago. Current cases were more than three and a half times those (1,570) in the same period of 1948 but were only two-thirds of the corresponding 1947 total (8,381). Thirty prefectures reported more cases this week than last week, 15 had fewer cases, and 1 did not change. The largest numeric changes were in Fukuoka; Kyoto, and Oita Prefectures where cases increased by 149, 145, and 101 respectively and in Shimane, Tokyo-to, and Hiroshima Prefectures where cases declined by 139, 100, and 93 respectively. The sum of the cases in 8 prefectures amounted to 50 percent of the total number this week. These prefectures were Fukuoka (661), Tokyo-to (457), Kyoto (400), Hokkaido (332), Osaka (326), Kumamoto (212), Oita (209), and Hyogo (201). Eleven additional prefectures had cases numbering from 118 to 190 each. Thus, 19 prefectures had 80 percent of all cases. In last week's report cases in Miyazaki Prefecture were listed as 359, but the figure has since been corrected to only 35. The current and cumulative case rates as of 16 April 1949 were 365.2 and 195.7 respectively.

Whooping cough cases this week (1,478) were 11 percent higher than last week (1,332). The current figure was approximately 75 percent greater than that (840) for the same week of last year but was more than 70 percent below the corresponding 1947 total (5,117). Cases increased over last week in 28 prefectures, decreased in 16, and did not change in 1. Wakayama Prefecture had no cases in either week. The current and cumulative case rates were 96.4 and 87.1 respectively.

The number of tuberculosis cases this week (9,130) was only slightly higher than in the previous week (9,059). They were 6 percent greater than in the same period of 1948 (8,577) and 25 percent above the corresponding 1947 total (7,312). The current and cumulative case rates were 595.2 and 502.0 respectively.

There were 9 percent fewer cases of pneumonia this week (3,901) than there were previously (4,297). Current cases were 8 percent greater than in the same week of last year (3,608) but more than 40 percent below the figure (6,751) for the corresponding period of 1947. More than half (25) of the prefectures had fewer cases this week than last week, 18 had more, and 3 did not change. The largest numeric changes occurred in Ibaraki Prefecture and Hokkaido where cases decreased by 101 and 99 respectively. The current and cumulative case rates were 254.3 and 240.4 respectively.

Influenza cases numbered 67 this week compared with 77 last week. In the same period of last year there were 86. Cases in Miyagi increased from zero last week to 10 currently, and there were increases of from 1 to 4 cases in each of 12 additional

prefectures. Decreases of from 1 to 8 cases each occurred in 9 prefectures. Three prefectures had the same number of cases in both weeks and nearly half (21) of the prefectures had no cases in either of the two periods. Current cases were distributed among 22 prefectures having from 1 to 10 cases each. The current and cumulative case rates were 4.4 and 3.8 respectively.

The current and cumulative numbers of syphilis cases were 3,922 and 61,932 respectively; for gonorrhea, 3,579 and 53,943; and for chancroid, 497 and 8,514. The current totals for gonorrhea and chancroid were both higher than last week when gonorrhea cases numbered 3,436 and chancroid cases 446. The number of syphilis cases, however, was less than in the preceding week (4,099). All current totals were below those in the same week of last year. At that time there were reported 6,084 cases of syphilis, 6,216 cases of gonorrhea, and 1,142 cases of chancroid. The current and cumulative case rates for each of these diseases were: syphilis, 255.7 and 252.3 respectively; gonorrhea, 233.3 and 219.8; and chancroid, 32.4 and 34.7.

SYPHILIS	255.7	396.6	184.7	252.3	292.4	158.8

FOOTNOTES:

1. There were no cases or deaths reported for cholera or plague.
2. Rates are the number of cases or deaths per 100,000 population, estimated as of 1 July 1948 and are computed on an annual basis.
3. A dash ( - ) indicates that no cases or deaths were reported and that the case or death rate was zero.
4. A rate of 0.0 indicates that there were some cases or deaths but that the rates was less than 0.1.
5. "NA" indicates that data are not available.
6. "NR" indicates that no report was received.
7. \* Cumulative figures adjusted for delayed and corrected reports.
